

CHAITANYA YEOLE

San Francisco, CA | [linkedin.com/in/chaitanyayeole](https://www.linkedin.com/in/chaitanyayeole) | (716) 228-1570 | cyeole99@gmail.com | github.com/ChaitanyaYeole02

Software Engineer with 3.5 years of experience developing backend systems. Strong background in building high-throughput APIs and real-time event-processing systems. Excellent communicator and cross-functional team player.

WORK EXPERIENCE

Datacrowd

Chicago, Illinois (Remote)

Software Engineer

January 2024 - June 2025

- Implemented a RESTful service layer using **Spring Boot and RabbitMQ** to ingest and normalize patient records daily from legacy hospital systems, which eliminated manual import effort by **~15 hrs/week**.
- Extended that platform to automate billing workflow and appointment scheduling, integrating Spring MVC, Redis caching to reduce billing errors from **200 to 120 incidents/month** (40% reduction) and 30 daily appointment conflicts **down to 0**.
- Achieved **patient-segment matching** across **500+ profiles daily** for personalized care using genomic, clinical history and demographic features. Used **transformer models** and deployed real-time inference via AWS Lambda to process data at scale.
- Secured all patient data with AES-256 encryption at rest and TLS 1.2 in transit, enforcing **HIPAA-compliant** access controls across **10,000+ patient records**.
- Leveraged **JVM profiling** (VisualVM) and **Hibernate** second-level caching to reduce average database query latency from **~200 ms to ~120 ms** (40% faster), boosting throughput from **300 to 420 transactions per minute**.
- Created serverless AWS Lambda functions (Python) to generate nightly operational reports (appointment volume, billing totals) and store CSV outputs in S3; this replaced a **manual 2 hr reporting process** with an **automated 15 min pipeline**.

The Research Foundation of SUNY

Buffalo, New York

Senior Research Aide

September 2023 - December 2024

- Built a multi-threaded pipeline where **Python workers** fetched genomic data from MySQL database read replicas, invoked AWS Lambdas to preprocess and save JSON to S3, and a final Lambda merged files, cutting export time **from 5 hr to 1 hr (80%)**.
- Developed scalable **GraphQL APIs** to serve REDfly's genomic-query use cases (gene lookups, regulatory region searches) by translating high-level PRDs into detailed schema and resolver implementations.
- Implemented **OAuth 2.0 and JWT** authentication with role-based permissions (researcher vs. admin) to secure access across **300,000+ genomic records**, ensuring only authorized users download sensitive datasets.
- Optimized MySQL database schema by adding secondary indexes on high-cardinality columns and deploying two read replicas, cutting query time from **~1 s to ~50 ms (95% faster)** and reducing CPU utilization by **60% during peak exports**.

Statiq (Y Combinator S20)

Delhi, India

Software Development Engineer II

January 2021 - June 2023

- Designed and implemented a Python-based **WebSocket server** to broadcast real-time charger-availability updates to mobile clients, replacing a polling approach that reduced server load by 90% and **saving \$1,800/month in infrastructure costs**.
- Integrated **AWS SNS topics** to publish charger event notifications (e.g., "charger available," "session started") to Lambda consumers that processed billing events, cutting end-to-end **transaction latency by 40%**.
- Developed REST endpoints in **Python Flask** to allow users to reserve chargers; backed by Redis caching to handle burst traffic (**1,000+ concurrent reservations**) without exceeding MySQL database connection limits.
- Designed and implemented **RBAC/ABAC systems** for secure and flexible data access management, ensuring compliance with enterprise security standards.

TECHNICAL SKILLS

Programming: Python, Java, Go, JavaScript

Frameworks / Libraries: FastAPI, Django, Flask, React.js, Spring Boot, Hibernate, Mockito

Technologies & Tools: AWS (Lambda, SQS, SNS, S3), Kubernetes, Docker, REST API

Databases / Caches: MySQL, MongoDB, Redis, Elasticsearch

EDUCATION

University at Buffalo, The State University of New York

Buffalo, NY

Master of Science (M.S.) in Computer Science and Engineering

December 2024

MIT - WPU

Pune, India

Bachelor of Technology in Electronics and Communication Engineering

October 2021

AWARDS / CERTIFICATIONS

All India Rank 1: National ABU Robocon 2020

June 2020
